

2022 CLEAN WATER PROJECT REPORT

EXECUTIVE SUMMARY

This year, 3 villages received grants for the Clean Water project. 29 motor-generated wells were provided to 101 families and 55 water filters will be used by 476 people among 3 villages. These places suffered from the difficulty of the source of water. Through this project, the beneficiaries were grateful that these will help them lessen the difficulties to have clean water they can use for everyday needs. They also plan to expand their livelihood because they have now a near source of water in their house. Some planned to expand their chicken raising, start home gardening, raise pigs, goats, and cows, and others will make ponds to put local freshwater fish. Mothers among the beneficiaries are really grateful and happy. This project will help them to lessen the expenses they used on buying water. They will be more productive because they will have more time to do other things since they have secure water near their house when they need it anytime. They were grateful to all the sponsors who help them to have this clean water source in their household.

INTRODUCTION

Why Clean Water Project is in need in Cambodia? This country is continuing working to improvements their water system to provide the needs of the people, but still many challenges are still hindering. According to recent proposal project posted in Asian Development Bank website, here are the 4 out of 10 factors considering to this need: Macroeconomic context with its effects of Covid-19 pandemic to economic; insufficient rural water supply, sanitation, and hygiene facilities and services; climate impacts; impact on health, the environment, and economic growth; and limited capacity of subnational administrations. We believe that water is life and it is an important need of every people. Without access to this will affect many aspects of individual's life, their family, and community. In response to this need, we started in small projects to provide assistant to at least 3 villages per year to have access to clean water.

BRIEF HISTORY

Clean Water Project in Cambodia under its implementation by the Community Health and Agricultural Development Program of the General Board of Global Ministries-United Methodist Church in Cambodia has a goal to help end the water crisis and restore hope in various poverty stricken provinces in Cambodia. Thanks to the generous support of the Brockus family, we initiated this life-saving project in 2021. We look forward to more partnerships with all who desire to take part in this project here in Cambodia. This year, we successfully implemented the year 2 of this project.

KEY RESULT AREAS

District	Village	Well	# of Families	# User		Water Filter	# of Families	# User	
				Female	Male			Female	Male
Kampong Cham	Phum Veal	10	37	84	56	22	22	103	60
	Vihearthom	0	0	0	0	13	13	31	29
Pailin	Deisor	10	41	135	57	0	0	0	0
Battambang	Dop Krasang	9	23	39	52	20	20	158	95
Total		29	101	258	165	55	55	292	184

PROJECT MODEL

- Empowering communities in their sense of ownership and confidence through a shared funding. We encouraged them that 30 % of the cost funds will be from them and 70 % from project donors.
- Through this, we can also confirm the intentionality of the level of participation of the community.
- This year, the 3 villages we work with participated in project model we have and shared their funds. In one follow-up evaluation visit in Kampong Cham, we see that the families really take care their wells and maximizing the use of this with joy in their hearts.
- This project is a support in our advocacy for Community-Based Health Education

CONCLUSION

As the dry season of 2023 is approaching, the need for water will increase. Climate change became additional problem for this need. We are looking forward to increased our funding at least 50% so we can fund more this 2023.

We believe that water is life and by supporting this project you support the life of the Cambodians in remote places.
