

### ENDINGS AND NEW BEGGININGS

The last quarter of 2024 was full of goodbyes as well as new starts. We were intensively involved in the community in areas of health care, hygiene and working alongside our partners to ease the significant burdens that are a part of these communities

CHAD has had many successes in various areas and every year that we can help we remain grateful for these moments.

We are grateful to our partners in the health care department for continuing to work alongside CHAD and we hope to continue doing so.

CHAD said goodbye to the health centers that we have worked with for over five years, we are sad to leave but we have always worked towards sustainability and we have hope that these VHSG have learnt lessons that will help their futures.

# CLEAN WATER

CHAD continues its clean water project to ease the suffering of water insecure communities all over Cambodia. We helped dig a deep water well for a home in Kampong Chhnang province that hosts different women who have health issues

This season of digging was extremely difficult as the ground area was tough with huge rocks but the contractors did their best and we are always grateful for their hard work

## CHAD IS GRATEFUL FOR:

- 31 wells dug in 2024
- 2 printers and 50 plastic chairs provides to two health centers in 2024
- 145 water filters provided in 2024
- Continuously working towards sustainability in all the projects that we take part in
